

SFC & HIPO CHARTS

FLOW CHARTS

HIPO CHARTS

Flowcharts

- A flowchart is an analytical technique used to describe some aspect of an information system in a clear, concise, and logical manner.
- Flowcharts use a standard set of symbols to pictorially describe transaction processing procedures.

Flowchart Symbols

- Flowcharting symbols can be divided into the following four categories:
- Input/output symbols
- Processing symbols
- Storage symbols
- Flow and miscellaneous symbols

Flowcharting Symbols: Input Output Symbols

Symbol	Name
	Document
	Display
	Input/output; Journal/ledger

Flowchart Symbols: Processing symbols

Symbol

Name

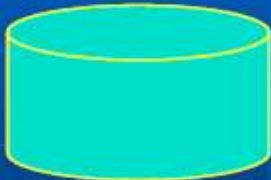

Manual operations

System processing

Flowchart Symbols: Storage Symbols

Symbol	Name
	Magnetic disk(DB)
	Magnetic tape

Flowchart Symbols: Flow and miscellaneous Symbols

Symbol

Name

Document or processing flow

What are Document Flowcharts?

- A document flowchart illustrates the flow of documents and information between areas of responsibility within an organization.
- A document flowchart is particularly useful in analyzing the adequacy of control procedures.
- Flowcharts that describe and evaluate internal controls are often referred to as *internal control flowcharts*.

What are Computer System Flowcharts?

- *System flowcharts* depict the relationship among the input, processing, and output.
- A system flowchart begins by identifying both the inputs that enter the system and their origins.
- The input is followed by the processing portion of the flowchart.

What are Computer System Flowcharts?

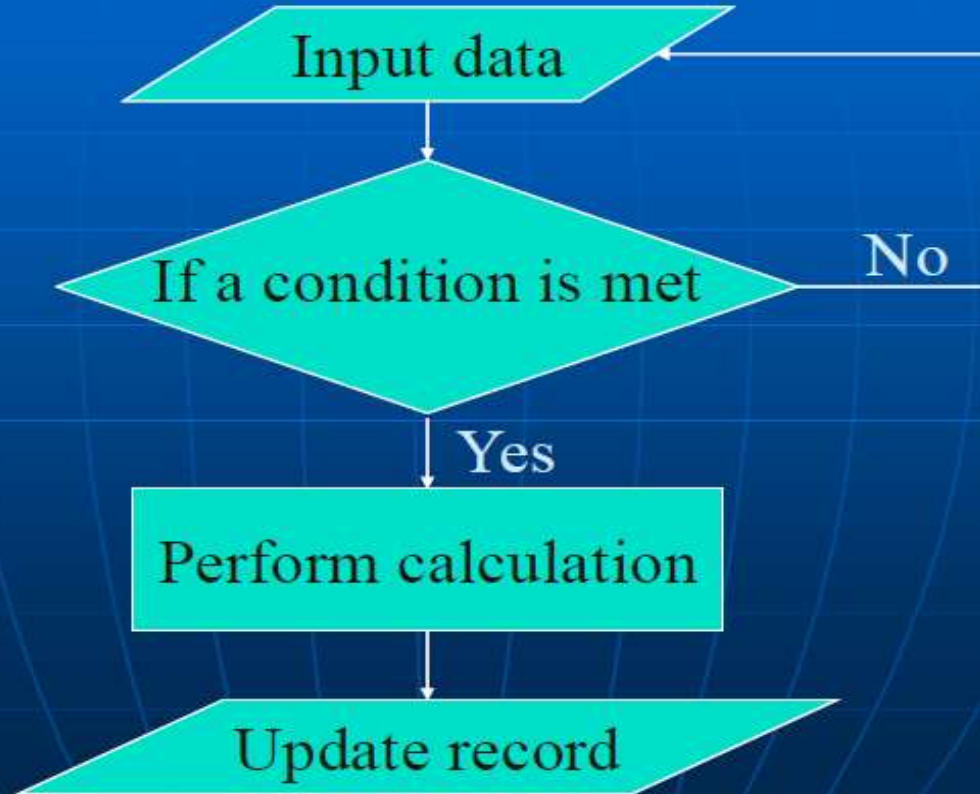

- The resulting new information is the output component.
- System flowcharts are an important tool of system analysis, design, and evaluation.
